

SOLO HANGING SYSTEMS

LOOP HANGER

Hang items quickly and safely

The Loop Hanger mechanism, in combination with steel cable, offers a quick and practical solution for hanging up various items: not only advertising signage or an individual panel in a room, but also more industrial items such as cable ducts, pipes, recessed spotlights or even recessed ceiling islands. The Loop Hanger guarantees quick installation without the need to use any tools. In addition to its hanging function, the system is also ideal for securing or supporting items.

The Loop Hanger is a hanging system that is extremely easy to use, the height may be adjusted in a single motion, and it is simple to disassemble. The steel cable can be inserted into the mechanism and blocked in two steps. It also offers countless options for hanging up any of your items. The Loop Hanger is available in four sets, including steel cable with a hook and loop connection, with the Micro Grip 1 mm picture hook and in combination with a frame hanger.
